PROFESSIONAL SUMMARY

Analytical and detail-oriented professional with a bachelor's degree specializing in AI and Machine Learning Management, combining a strong academic foundation with hands-on experience in Python, data analytics, cybersecurity, and AI-driven solutions. Experienced in developing and managing machine learning initiatives, automating business processes, and applying technology to solve complex operational and security challenges. My background bridges artificial intelligence, cloud technologies, and cybersecurity, allowing me to approach problems from both technical and strategic perspectives.

EXPERIENCE

Solutions Engineer - Internship — Feb – Jul 2026

Microsoft · Brussels, Belgium (Hybrid)

- Designed and deployed AI agents using Microsoft 365 Copilot Studio and Power Automate to automate enterprise workflows for client organizations.
- Delivered technical demonstrations and AI adoption workshops for universities and enterprise customers.
- Collaborated with solution architects to translate business requirements into AI-powered automation solutions.
- Presented Copilot Studio solutions to partners including PwC, EY, KPMG, and Avanade.
- Built AI automation workflows integrating Microsoft 365, Power Platform, and Azure AI services.
- Developed an automation workflow with Power Platform connected to an AI agent in SharePoint where every time a user uploaded a document, the automation interacted with the AI agent to adjust the title of the document to the intended SharePoint site.
- Helped to develop an AI agent in Copilot Studio with the goal to retrieve financial information from PDF receipts and send an email to the intended user notifying them of the finding and to-do actions for an outside client.

EDUCATION

Bachelor's in Management of AI & Machine Learning — 2023 – 2026

UBI / Middlesex University · Brussels, Belgium

Postgraduation in Applied Artificial Intelligence — 2026 – 2027

Erasmushogeschool Brussel · Brussels, Belgium

PROJECTS

AI Agent LLM Output Capture Tool — Developed an AI-powered agent to capture, organize, and manage LLM-generated outputs using prompt engineering and REST API integrations, enabling structured storage and retrieval of AI interactions.

Prompt Injection Simulator — Developed an AI security platform simulating prompt injection attacks across Direct, RAG, and Agent architectures. Implemented a TF-IDF and Logistic Regression detection model trained on the deepset/prompt-injections dataset, with planned enhancements using DistilBERT and SHAP for explainable AI.

Phishing Investigation Agent with local LLM — A local-first phishing triage tool. Deterministic code parses the .eml, extracts IOCs, and computes an explainable triage score; a local LLM (via Ollama) turns that evidence into a schema-validated analyst report; and a verifier cross-checks the LLM's claims against the deterministic evidence.

Database Management Project — Built a MySQL database from Olist's public marketplace data (112,650 order items, 32,951 products, 99,441 customers) and wrote analytical SQL to answer seven business questions on revenue, pricing, catalogue mix and logistics cost.

Email Spam Classifier — Built an NLP spam classifier (text normalization, stemming, bag of words, Random Forest) on 5,171 Enron emails, reaching 98.5% accuracy and 98% spam recall on a stratified held-out set.

SKILLS

AI & Automation: M365 Copilot Studio · Power Automate · Azure AI Foundry · Power Platform

Cloud: Azure · AWS

Security: Splunk · Wireshark · Nmap, · Linux

Programming Language & Data: Python · Java · Go · MySQL · PostgreSQL · HTML & CSS

CERTIFICATIONS

CompTIA

- Cybersecurity Analyst (CySA+)
- Security Analyst (Security+)
- Artificial Intelligence Security Analyst (SecAI+)
- Network Administrator (Network+)

Massachusetts Institute of Technology

- Applied Generative AI for Digital Transformation

Amazon Web Services

- Cloud Foundations
- Cloud Security Foundations

Microsoft

- AZ-900 (Azure Fundamentals)
- AB-900 (Copilot and Agent Administration Fundamentals)
